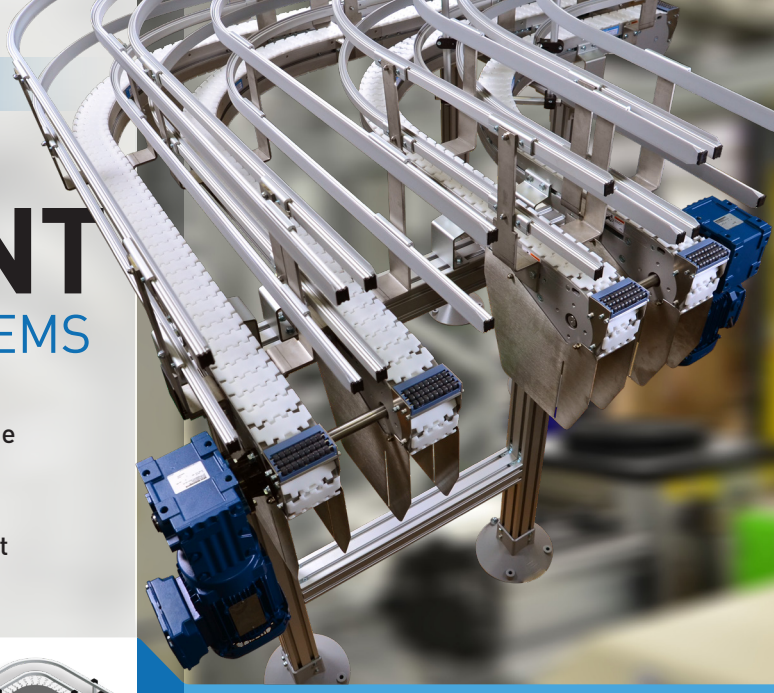
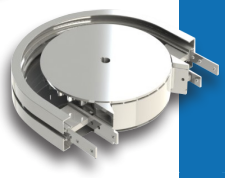
POINT-TO-POINT
PLASTIC CHAIN CONVEYOR SYSTEMS



Point-to-point plastic chain conveyor systems feature a modular design to fit the curves and elevation changes of your plant with the flexibility to reconfigure your system when those things change. These systems can be anything from a simple turn between two machines, to multiple conveyors working together to bring product through every step of production.

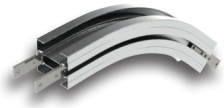
FEATURES AND BENEFITS

MODULAR DESIGN
Flextrac Series conveyors feature modular components — curves, vertical bends and straight sections — that can be configured in infinite ways to fit your plant. When your layout changes, parts can be added or removed to adapt it to the new layout.



WHEEL BENDS
Wheel bends allow tight turns anywhere along the length of the conveyor. The free-spinning wheel reduces friction, making these the preferred method for turns.

PLAIN BENDS
Horizontal Plain bends are used for turns with a wider radius. Vertical Plain bends elevate or lower product as it is being conveyed. On conveyors where multiple plain bends are used, the total of all angles cannot exceed 180˚.



T-SLOT DESIGN
The frame is constructed with a t-slot design that simplifies integration. It can be used to mount accessories, supports and guides.

PLASTIC CHAIN
Plastic chain has the ability to make turns and elevation changes within a single conveyor. These durable chains are also modular, with individual links that can be replaced to make chain repairs.

APPLICATIONS

- Packaging
- Automation & Assembly
- Automotive
- Brewery
- Food Processing
- Material Handling
- Pharmacy & Medical
- Marking & Coding

Point-to-point Conveyor Systems | Flextrac Series

PLASTIC CHAIN TECHNOLOGY BY MODU
With more than 25 years experience, Modu is a leader in modular plastic chain conveyors.

Length	Max Part Weight	Max Load	Speed
up to 98.5'	33 – 66 lbs	440 – 880 lbs	up to 164 fpm
	Dependent on width	Dependent on width
